Your Voice, Your Development

AI-Powered Citizens Priority Platform

Track 1: Peoples Priorities

Team: Desina Rohit, B Surendra, Chakradhar Chowdhry G

July 2026

- Citizens lack effective channels to communicate development needs to their MPs
- MPs receive thousands of unstructured requests - manual sorting is impossible
- No AI-powered prioritization exists for constituency development planning
- Language barriers exclude millions who speak regional Indian languages
- No centralized dashboard exists for tracking citizen requests end-to-end

- Citizens submit via Text, Voice (12 languages), or Photo - auto-location detected
- Gemini AI analyzes, categorizes, and assigns urgency scores automatically
- Priority ranking engine aggregates by volume, urgency, recency, and category
- MPs see AI-prioritized submissions filtered by their sector (health, education, etc.)
- MPs take action: review, mark in-progress, resolve, or reject with notes
- Hotspot map shows geographic concentration of issues across the constituency

- Frontend: React 18 + Vite + Tailwind CSS - 133KB JS gzip production build
- Backend: Python FastAPI serving API + static frontend on single server
- Database: Google Cloud Firestore (5,000+ real CPGRAMS submissions)
- Analytics: Google Cloud BigQuery for trend analysis
- Deployment: Google Cloud Run with auto-scaling (free tier, \$0 demo cost)
- Mapping: Vanilla Leaflet with grid-based DBSCAN clustering for hotspots

GEMINI AI

- Text categorization by department
- Urgency scoring (critical->low)
- Theme extraction from descriptions
- Evidence summary generation
- Priority ranking algorithm

SPEECH & VISION

- Speech-to-Text: 12 Indian languages
- Voice recordings transcribed in real-time
- Vision API: Photo content analysis
- Object/landmark identification
- Automatic language detection

SUBMISSION METHODS

- Text input in any language
- Voice recording with auto-transcribe
- Photo upload with AI analysis
- Auto-GPS location detection
- Address auto-fill via reverse geocoding

INCLUSIVITY

- 12 Indian languages supported
- Voice input for low-literacy users
- Photo-based reporting (no typing)
- Mandatory name + phone for accountability
- Free to use, no login required

OVERVIEW & PRIORITIES

- Real-time stats (total/pending/resolved)
- AI priority rankings with progress bars
- Category breakdown chart (8 categories)
- Recent submissions feed

MANAGEMENT

- Filter by status + priority + sector
- Search by name, phone, location
- Detail panel with action buttons
- Export to CSV, AI evidence summaries

- Formula: Volume(35%) + Recency(25%) + Urgency(25%) + Category Weight(15%)
- Volume: number of submissions per category per time period
- Recency: newer submissions weighted higher using exponential decay
- Urgency: critical(4) > high(3) > medium(2) > low(1)
- Category weight: infrastructure emergencies weighted higher than routine requests
- Result: MPs see what needs attention first, backed by AI analysis

- 5,000+ submissions generated from real CPGRAMS data via data.gov.in
- 8 categories: Infrastructure, Education, Health, Water, Sanitation, Transport, Agriculture, Electricity
- Geographic distribution across Indian states (UP, Maharashtra, Karnataka, MP, Bihar, TN, Gujarat)
- Priority scoring drives action: critical issues surfaced within seconds of submission
- Sector-based MP routing ensures each official sees only relevant submissions
- All open-source components cited, data sources publicly attributed

- Single-server FastAPI architecture serves 5000+ submissions instantly
- Firestore auto-scales to millions of documents without configuration
- Cloud Run auto-scales from 0 to N instances based on traffic
- Frontend production build: 133KB JS + 4.6KB CSS gzipped for fast loading
- All 5 Google Cloud services within free tier limits (\$0 demo cost)
- Infinite scroll pagination (50 per page) for smooth browsing of all submissions

- 1. Landing: Live stats, category grid, recent issues feed, how-it-works section
- 2. Citizen Form: Name/phone required, 12 languages, text/voice/photo, auto-GPS
- 3. Thank You: Confirmation with tracking ID + Submit Another button
- 4. MP Login: Register with sector (health, education, etc.), secure token auth
- 5. MP Dashboard: Stats, AI rankings, filtered submissions, detail panel, actions
- 6. Hotspot Map: Interactive Leaflet map with color-coded cluster markers
- 7. Priorities Page (Public): Ranked categories with AI evidence summaries
