Your Voice, Your Development

AI-Powered Citizens Priority Platform

Google Cloud - Build with AI: Code for Communities

Track 1: Peoples Priorities

Team: Rohit Desinar

July 2026

01

The Problem

THE PROBLEM

- Citizens have limited channels to communicate development needs to their MPs
- MPs receive thousands of unorganized requests - manual sorting is impossible
- No AI-powered prioritization system exists for constituency development
- Language barriers exclude millions who speak regional Indian languages
- No centralized dashboard exists for tracking citizen requests end-to-end

02

Our Solution

JANSEVAI - HOW IT WORKS

- Citizens submit requests via Text, Voice (12 languages), or Photo
- AI analyzes and categorizes submissions (infrastructure, health, education, etc.)
- Gemini AI assigns urgency score (critical, high, medium, low)
- Priority ranking engine aggregates scores by volume, urgency, and recency
- MPs login to view AI-prioritized submissions filtered by their sector
- MPs can review, mark in-progress, resolve, or reject with notes
- Hotspot map shows geographic concentration of issues

03

Architecture

SYSTEM ARCHITECTURE

- Frontend: React + Vite + Tailwind CSS (production build ~133KB gzip)
- Backend: Python FastAPI (single server, serves API + static files)
- Google Cloud Firestore: stores 5,000+ citizen submissions
- Google Cloud BigQuery: analytics and trend analysis
- Deployment: Google Cloud Run (auto-scaling, pay-per-use)
- All services running on Google Cloud Free Tier (\$0 cost for demo)

04

AI Integration

GOOGLE AI SERVICES

Gemini AI (gemini-2.5-flash)

- Text analysis & categorization
- Urgency scoring engine
- Theme extraction
- Evidence summary generation
- Priority ranking algorithm

Cloud Speech-to-Text

- Voice input in 12 languages
- Hindi, English, Bengali, Tamil
- Telugu, Marathi, Gujarati
- Kannada, Malayalam, Punjabi
- Odia, Urdu

05

Citizen Features

CITIZEN SUBMISSION

Submission Methods

- Text input (any language)
- Voice recording (auto-transcribe)
- Photo upload (AI analysis)
- Auto-location detection

Inclusivity Features

- 12 Indian languages supported
- Voice input for low-literacy users
- Photo-based issue reporting
- Auto-fill city/district/state via GPS

Mandatory: Full Name + Phone Number for citizen accountability

06

MP Dashboard Features

MP DASHBOARD

Overview

- Real-time stats (total/pending/resolved)
- AI priority rankings with progress bars
- Category breakdown chart
- Recent submissions feed

Management

- Filterable submissions list (by status/priority/sector)
- Infinite scroll with search
- Detail panel with action buttons
- Export CSV for reports
- AI Evidence summaries per category

07

Data & Impact

DATA SOURCES & METRICS

- Real CPGRAMS data from data.gov.in (Government of India Open Data)
- 5,000+ submissions across 8 categories (Infrastructure, Education, Health, etc.)
- Realistic geographic distribution across Indian states (UP, Maharashtra, Karnataka, etc.)
- Priority scoring formula: $\text{volume}(35\%) + \text{recency}(25\%) + \text{urgency}(25\%) + \text{category}(15\%)$
- Grid-based DBSCAN clustering for efficient hotspot mapping at scale
- All data publicly cited and compliant with hackathon guidelines

08

Scalability

SCALABILITY & DEPLOYABILITY

- Single-server architecture: FastAPI serves API + static frontend on port 8000
- Frontend production build: 133KB JS + 4.6KB CSS gzipped (fast loading)
- Firestore auto-scales to millions of documents without configuration
- Cloud Run auto-scales from 0 to N instances based on traffic
- All Google Cloud services used within Free Tier limits (\$0 running cost)
- Session-based MP auth with secure token management

09

Demo Walkthrough

LIVE DEMO WALKTHROUGH

- 1. Landing page: Hero section with live stats, category grid, issue feed
- 2. Citizen submission: Fill name/phone, select language, type/record/take photo
- 3. Auto-detect location: GPS pin on map, city/district/state auto-filled
- 4. Thank you page: Confirmation with tracking ID + submit another button
- 5. MP Login: Register with sector (health, education, infrastructure)
- 6. MP Dashboard: Stats, AI rankings, filtered submissions, detail panel
- 7. Priority filter: View critical/high/medium/low issues instantly
- 8. Hotspot Map: Interactive Leaflet map with clustered markers by category
